Phoebus Careers Team
Phoebus Software Ltd.
Radcliffe House, Blenheim Court
Solihull

Dear Sir or Madam,

I am writing to be considered for the graduate analyst programmer position. Having met recently with a fellow graduate from my university (Aberystwyth), the position and your work environment suggests I would enjoy being part of the team.

I am currently in my final year of study at Aberystwyth, in my fifth year studying my masters year as part of my MEng degree in software engineering. I think that from reading the role on the document that was given to me by your recruitment team at a recent careers fayre, I would be a good fit.

I have extensive knowledge of a range of programming and web-programming languages such as Java, C#.NET, PHP, SQL, Perl and Python, alongside being up to date with the most recent HTML5 and CSS3 features.

Through both my year industry (JavaEE application for a company in Germany), and a summer job this year (PHP development and cucumber testing), I have a good amount of experience developing live real-world systems. This also reflects in my good team work skills, which I have used in not only my employment but in university projects such as at masters level. Communication is a strong point of mine, and I have confidence in speaking out, as current president of my university's badminton club.

I'm also quite fluent at using repository management systems such as Git and SVN which I strive to use in any projects or assignments. I hope to build a good working relationship with others, and build a career at a company such as yours by working hard. I hope to hear from you soon, and hopefully get a better idea of the role's day-to-day requirements.

Yours faithfully,

Craig Heptinstall
